IMMEDIATE RELEASE MARCH 19, 1986

PURCHASES OF NEW CARS, SCRAPPAGE OF
OLDER MODELS HIT RECENT YEAR HIGHS

(DETROIT) -- New car registrations in the United States climbed for the third straight year, hitting 10.4 million units, their highest level in six years on June 30, 1985. In the year ended that date, 7.7 million automobiles were scrapped, the greatest volume since 1981. The net increase of 2.6 million units during the period means there were 114,662,333 passenger cars in operation in the U.S. in mid-1985.

The growth in both new car registrations and the scrappage of older venicles was documented in a report issued today by R. L. Polk & Co., automotive industry statistician. Polk's motor vehicle registrations report covered the period between July 1, 1984 and June 30 of last year and includes the latest available figures.

"Interestingly, despite the fact that new car registrations were at their highest point in five years, the median age of the passenger car population continued to rise," said R. D. Borthwick, Vice President-Manager of Aftermarket Services for Polk's Motor Statistical Division.

-more-

"The median age of passenger cars is 6.9 years--up from 6.7 years in mid-1984.

Borthwick noted that the median age of the automobile population was 6.5 years in 1983 and only 4.9 years in 1970.

"A lot of older vehicles are being kept in operating order by the ever-increasing availability of replacement parts at reasonable prices," Borthwick said. "But it's also apparent that increasing numbers of Americans want, and are able to afford, new cars."

New car registrations increased by 700,000 between July 1, 1984 and June 30, 1985--approximately one-half the increase recorded in the previous comparable period. In the same 1984-85 time span, the number of cars in use aged over 15 years grew by 929 thousand units to a total of 9.8 million registered. The previous year's growth of cars in this age group was 980 thousand units.

Other highlights of the R. L. Polk report:

* The 2.4 percent growth of the nation's passenger car population was the second highest since 1977-78, with only the 1983-84 period exceeding it.

* The 7.7 million cars not re-registered in the latest reporting period compares with presumed scrappage of 6.7 million in the previous year and with the record scrappage total of 9.3 million during 1978-79.

* Automobiles not re-registered during the 1984-85 period amounted to 6.9 percent of the national car population, an increase of eight-tenths of a percent from the previous year.

"There's been a fairly steady increase in the median age of the U.S. car population for 15 years, and the truck fleet is gradually getting older too," Borthwick said. "Its median age now is 7.6 years."

The latest Polk report indicates there were more than 42.3 million trucks in operation on June 30, 1985--an increase of 2.2 million from the previous July 1. Registration of new trucks during the period hit an all time high of 4.3 million. Truck scrappage of 2.1 million units also was a record, well above the 1.92 million mark noted in 1978-79.

IMMEDIATE RELEASE MARCH 19, 1986

NUMBER OF TRUCKS OPERATING IN U.S.
SOARS; SCRAPPAGE, MEDIAN AGE RISE

(DETROIT) -- The truck population in the U.S. swelled by 2.2 million or 5.6 percent to a total of 42.4 million units in the year ended June 30, 1985.

Registration statistics compiled by R. L. Polk & Co., automotive industry statistician, covered the period between July 1, 1984 and June 30 of last year and are the most recent available.

"The increase was certainly influenced by new truck sales performance during the latest July-June period," said R. D. Borthwick, Vice President-Manager of Aftermarket Services for Polk's Motor Statistical Division. "The industry registered 4.3 million new trucks in that period--a new record."

At the same time, Borthwick pointed out, a new record for the retirement and presumed scrappage of trucks was set: 2.1 million units, as compared to previous record of 1.9 million units taken off the registration rolls in 1978-79.

Despite the heavy pace of new truck sales and the high retirement rate of older units, the median age of the U.S. truck population increased to 7.6 years from 7.4 years in mid-1984.

-more-

"A lot of things are happening that seem to have an effect on the number of trucks in operation," Borthwick said. "Among them are the resurging U.S. economy, consumer acceptance of the mini-van (officially classified by the industry as a truck) and deregulation of the trucking industry. Furthermore, industry forecasts suggest that the dynamics of the trucking and related industries will continue. We're anticipating some very interesting effects on future truck census statistics."

Seven hundred thousand more new trucks were registered in the year ended June 30, 1985 than in the previous year. A half-million more trucks were scrapped in the latest reporting period than in 1983-84.

"The 5.6 percent growth in the total number of trucks in use was the largest since 1978-79," Borthwick said.

The 7.6 year median age of the truck fleet compares with the 6.9 year median age of the passenger car population, which increased from 6.7 years in mid-1984. New car registrations totaled 10.4 million during the most recent 12 month period, an increase of 640,000 units from the previous year. Newest figures indicated that more than 7.7 million cars were not re-registered and are presumed to have been scrapped--up from the 6.7 million automobiles scrapped in the year ended June 30, 1984. The passenger car population in mid-1985 was 114,662,333.
